

The TD 01.1 equipment, has been designed for the study and understanding of the behavior of a gasoline four-stroke combustion engine.

With this equipment, the necessary tests can be carried out to obtain the data characteristic of the engine operation, thus familiarizing the students with the curves presented by the manufacturers of the same as a sample of their operation.

The internal combustion engine bench, has two engines, the engine to be tested, and therefore acts as such, in our case a fourstroke gasoline engine, and the braking system, which is constituted by a three-phase asynchronous engine controlled by a frequency inverter. The latter can function as both engine and generator.

COMPUTERIZED SYSTEM:

The Engine Test Bench (TD 01.1) is equipped with a complete computer system, which greatly streamlines the work of tests or experiments.

The system is able to control and register all the variables of the equipment.

The tests can be done manually or automatically, just indicate the required variables and indicate how many points we want the graph of results. This way you do not waste time in aiming results and drawing the graphs by hand.

The equipment includes a PC with the equipment management software. In the same the parameters of all control points of the equipment are shown, and the data collection is allowed in automatic or manual mode.

The user manual clearly shows and with a large number of images, the entire process to be followed to operate the equipment.

The practical manual shows and explains all the theoretical foundations, as well as the mathematical formulas used for the realization of all the experimentation.

The system has a device for measuring the volume of air sucked by the engine, so that calculations can be made corresponding to the air-fuel ratio, etc.

LEARNING OBJECTIVES

• Characteristic curves of the engine:

- Torque Rotational speed.
- Brake power Rotational speed.
- Temperature Rotational speed.
- Air/fuel relation Rotational speed.
- Specific fuel consume Rotational speed.

TECHNICAL DATA

TEST BENCH

- Steel structure with damping system.
- Wheels for easy moving of the unit and blocking.

TECHNICAL DATA OF DIGITAL SENSORS

- Load cell for mechanical torque measurement.
- Exhaust gases temperature sensor.
- Electronic sensor of revolutions measurement.
- Flowmeter for air consumption.
- Digital meter for fuel consumption.
- Air inlet temperature sensor.

ENGINE`S SPECIFICATIONS

COMBUSTION ENGINE

- 4-stroke gasoline combustion engine
- Maximum rotational speed 3.600 r.p.m.
- Maximum power 4,0 KW at 3600 r.p.m.
- Maximum torque 10,8 Nm at 2500 r.p.m.
- Valves at the head.
- Displacement: 163 cc
- Cooling system: forced air
- 15 kg Dry mass.

ELECTRIC MOTOR

- Type: Three-phase asynchronous motor.
- Power / Voltage: 7,5 HP / 380 V.

OTHER TECHNICAL DATA

- Brake resistance 3,5 KW, 55 Ohm.
- Computer included.

REQUIREMENTS

• Power supply: III 380-415 Vca / 50-60Hz

Note: The image shown may not correspond exactly to the supplied equipment.
